Backend-focused Engineering Lead with **3+ years** of experience owning backend development across a distributed **Node.js** microservices platform. Work spans API design, third-party integrations, search, AI pipelines, and team leadership — with a focus on systems that hold up in production.

EDUCATION

Symbiosis Institute of Computer Studies and Research (SICSR)

Bachelor of Computer Applications, Honours in Data Security

Pune, MH

Aug 2022 – May 2025

SKILLS

Backend & APIs: Node.js, JavaScript/TypeScript, Python, REST APIs, GraphQL, Apollo Server, Webhooks, Authentication, Rate Limiting

Databases, Search & Infra: PostgreSQL, Sequelize, Redis, Elasticsearch, MeiliSearch, Pinecone, Docker, Kubernetes, ArgoCD, BullMQ, Nginx, Linux, Git, Prometheus, Grafana, Puppeteer

Integrations & Automation: WhatsApp Cloud API, WhatsApp Flows, Instagram Graph API, Tally ERP, Razorpay, Shiprocket, n8n, Event-driven Systems

AI & Frontend: RAG, LangGraph, Prompt Engineering, OpenAI API, Anthropic API, Intent Classification, Next.js, React, Tailwind CSS, EJS

EXPERIENCE

Multiply Tech India Pvt. Ltd.

Noida, UP

Jan 2025 – Present

Engineering Lead – Backend & Automation Systems

Feb 2026 – Present

- Leading a team of **3 engineers** (frontend, backend, AI) — technical direction, architecture calls, code reviews; promoted from FSE after taking full ownership of backend architecture. Ran the intern hiring cycle (**4 interns**) including group discussions and interviews.
- Own backend feature development across **8+ Node.js microservices**, **~280 PostgreSQL** tables, **GraphQL** + REST APIs on **Kubernetes** — processing **10,000+ WhatsApp messages daily** across **70+** business accounts.
- Built and shipped an **Instagram** chatbot platform — **OAuth 2.0** integration, form-based prompt generation, browser-based preview, and automated live deployment via **Instagram Graph API**.
- Eliminated manual cross-system tracking of orders, invoices, and payments for retailers by building a **Tally ERP** two-way sync via custom TDL scripts — replacing a workflow that had been managed across multiple disconnected tools.
- Cut WhatsApp order response time from **500ms+ to under 200ms** by refactoring the placement flow from **5 sequential API calls to 2** — collapsed a multi-step retailer interaction into a single button press.
- Designed AI chatbot decisioning architecture (intent classification, cart extraction, price negotiation, multilingual) — directed implementation in **LangGraph/Python** on **OpenAI API**.
- **60% faster API response times** (100ms+ → under 50ms) and **99.9% request success rate** sustained across the platform — achieved through async processing, **Redis/DragonflyDB** caching, and targeted query optimization.

Full Stack Engineer

Jan 2025 – Feb 2026

- Built core **WhatsApp** commerce flows using **Meta Cloud API** — onboarding, ordering, engagement; designed **n8n** pipelines automating **10+ operational processes**.
- Built **AI-driven** chat decisioning pipeline using **OpenAI API** for intent classification and quantity extraction in a multilingual retail context.
- Developed internal dashboards using **Next.js** and **Apache Superset**; managed one direct report while contributing across the full backend stack.

SoloNodes.net

Remote

May 2020 – Jul 2022

Founder & Developer

- Started a game server hosting business in high school. Built the client-facing dashboard in **Node.js/EJS** — server management panel, points-based billing, and automated provisioning on top of Pterodactyl. Got it to profitability and eventually sold it.
- Wrote **Discord bots** for support automation, giveaways, and community events. Built and ran a Discord server that grew to **10,000+ members**.
- Managed freelancers, handled customer support, kept infrastructure running — did everything as a solo founder.

PROJECTS

WA Bulk Messenger — WhatsApp campaign tool with scheduling, rate limiting, and delivery controls (**Node.js**, **PostgreSQL**).
