Engineering Lead with 2+ years of experience architecting and owning backend and automation platforms at scale. Currently leading WhatsApp-based commerce and workflow systems powering operations for 1000+ retailers. Strong focus on system design, technical ownership, performance optimization, and building internal platforms that replace manual business processes.

EDUCATION

Symbiosis Institute of Computer Studies and Research (SICSR)

Bachelor of Computer Applications, Honours in Data Security

Pune, MH

Aug 2022 – May 2025

SKILLS

Backend & APIs: Node.js, JavaScript/TypeScript, REST APIs, Webhooks, Authentication, Rate Limiting

Automation & Platforms: WhatsApp Cloud API, WhatsApp Flows, n8n, Workflow Orchestration, Event-driven Systems

Databases & Search: PostgreSQL, Redis, MeiliSearch, Query Optimization, Indexing

Frontend: Next.js, React, Tailwind CSS

Infra & DevOps: Docker, Linux VPS, Nginx, Git

AI & Tooling: Intent Classification, GitHub Copilot, AI-assisted Development

Leadership: System Design, Technical Roadmapping, Code Reviews, Mentorship, Architecture Ownership

EXPERIENCE

Engineering Lead – Backend & Automation Systems

Jan 2025 – Present

Multiply Tech India Pvt. Ltd.

Noida, UP

- **Owned backend and system architecture** for a WhatsApp-based automation platform using Meta Cloud APIs, supporting onboarding, ordering, and engagement workflows for **1000+ retailers**.
- **Designed and implemented workflow orchestration pipelines** using **n8n** and backend services to automate **10+ operational processes** including order confirmations, cashback updates, retries, and notifications.
- **Led design and rollout of Meta template creation and sending workflows**, enabling structured template lifecycle management and reliable high-throughput message delivery.
- **Built AI-driven chat decisioning pipelines** for intent classification, quantity extraction, and dynamic flow routing, significantly reducing manual intervention in conversational flows.
- **Improved backend performance and reliability** through async processing, caching, and query optimization, reducing average API latency by **40%**.
- **Developed internal dashboards and control panels** using **Next.js** and **Superset** for analytics, automation health, and operational monitoring.
- **Reviewed designs and code, mentored junior engineers**, and drove backend engineering best practices to improve delivery quality and system stability.

Software Developer (Contractual)

May 2020 – Jul 2022

SoloNodes.net

Remote

- **Built backend-driven dashboards and automation tools** supporting hosting operations and analytics for **10K+ users**.
- **Automated VPS provisioning, monitoring, and alerting** using REST APIs and shell scripts, achieving **99.8% uptime**.
- **Deployed and secured Linux infrastructure** using Docker and Nginx with backup and recovery pipelines.

PROJECTS

WA Bulk Messenger — WhatsApp campaign automation system with scheduling, rate limiting, delivery optimization, and API throughput controls (Node.js, PostgreSQL).

TravelEase — AI-assisted backend service for itinerary generation and third-party booking integrations (Flask, REST APIs).
